

Liberty MDrive 42mm Rotary Stepper Motor

Programmable Motion Control NEMA 17 integrated 1.8° 2-phase stepper motor & control electronics

UL[®] LISTED CE RoHS REACH IP20/IP65

PRODUCT OVERVIEW

Robust Liberty MDrive (LMD) Motion Control products integrate 1.8° 2-phase stepper motors with control electronics. Included are on-board programmable motion controller for stand-alone operation, and optional hMT closed loop performance.

hMT closed loop performance is available in products with either a multi-turn absolute encoder or incremental magnetic encoder. Closed loop performance maintains functional motor control to prevent loss of synchronization, offers variable current control, torque control, and use more of the motor's full torque range.

Multi-turn absolute encoders may benefit users by retaining position information when powered down. This can eliminate homing routines and reduce setup time at system startup.

Product parameterization, programming and monitoring is through user-friendly software with an RS-422/485 serial interface. Settings can be downloaded and stored in non-volatile memory.

Especially well suited for industrial applications, products include an IP65 rated version with circular M12 connectors.

Compact Liberty MDrive products can reduce machine complexity, size and cost in many stepper and servo motor applications. Their high degree of integration can increase system reliability by reducing the number of individual components, eliminating multiple potential failure points.
